- Suitable for sterilization.
- Producer: Made in Poland by a professional workwear company with over 20 years-experience.

Note: This product is not classified as a medical device

Well-built industrial, reusable face masks made from a 1-ply cotton-blend fabric with polyester tie-back cord. The fabric is OEKO-TEX certified 35% cotton, 65% polyester. The mask is made from one fabric panel with 3 overlaps for face adjustment. The fabric has special hydrophobic finish HYDROFOIL®. Hydrofoil is the nanotechnology formula which adds water and oil repellence properties to fabric. Hydrofoil finishing prevents fabric against liquids: water, oil and, low concentrated acids and bases. The fabric properties were tested according ISO 6530 and EN 368 (Protection against liquid chemicals.). The fabric is also suitable for sterilization. The masks were tested up to 50 launderings and performed well.

Ideal for many environments including factory workers, front line, retail, schools, office. These are **not medical devices** and are not intended for patients nor for healthcare professionals in medical settings. The mask does not protect against infective agents but offers preventative hygiene.
