 - Unprinted fabric masks can be washed at 60°C
- Color: White
- Made in Europe by a professional workwear company with over 20 years-experience

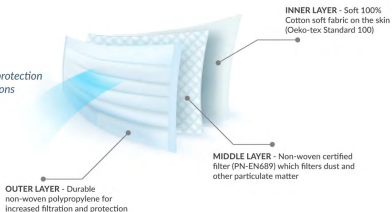

size: 13 x 19cm

Reusable consumer face masks made from a 3-ply filtering fabric with polyester tie-back cord. The inner layer is OEKO-TEX certified 100% cotton soft fabric on the skin. The middle layer is a filter layer (PN-EN 689) which filters dust and other particulate matter, with a filtration capacity of 96% at 6h exposure. The outer layer is a durable non-woven polypropylene for increased filtration of small particles and added protection. "Venice" is made from two fabric panels, which creates a conical shape with a seam down the middle. One can print on either side of the seam, but not directly on the seam.

This item is not intended as a Medical Device, and should not be used in surgical or clinical settings. Our masks, like other fabric face masks do not protect from corona-virus penetrating the mask. However, there are studies that show they do help reduce the spread of disease by acting as a blockade from the user touching their own mouth and then inadvertently spreading to others.

3-ply structure gives better protection
compared to 1-2 layer solutions
